WHAT IS A DENTAL IMPLANT:

A dental implant is a small titanium fixture that serves as the replacement for the root portion of missing natural teeth (diagram). The implant is placed in the bone of the upper or lower jaw and allowed to bond with the bone and serve as an anchor for the replacement tooth.

IMPROVE APPEARANCE:

When teeth are lost, ongoing shrinkage of the jawbone occurs making the face look older. Dental implants can slow or stop this process. Success rate for implants have been over 95%.*

REPLACE TEETH FOR LIFE:

Dental implants can be used to replace single lost tooth or many missing teeth. Implant -supported replacement teeth are like natural teeth because they are anchored securely to your jawbone. Dental implants feel and look like your natural teeth.

With proper oral hygiene your implants can last you a lifetime.

OUR LAB IS RUN BY OUR OWN PICASSO

Great work is rooted in talent and today requires the best tools. However, effective design is the result of curiosity and training, persistence and patience. There must be continuing desire and ability to reinvent the process to deliver the most accurate and precise result, that is why our lab is continuously striving for excellence.

"IT IS NOT YOUR MOTHER'S DENTURES "WE PROMISE"

Natural teeth and underlying bone provide a framework that supports the structures of the face including the lips, cheeks and the nose. When teeth are lost the ability to eat and chew properly is impaired, and it becomes difficult to maintain a proper diet. In addition, without teeth we can not speak clearly and distinctly. Your prosthodontist may use several different procedures for ill fitting lower dentures such as the placement of two implants that help improve the retention & comfort of dentures.

USE OF CROWNS

When decay is more extensive a crown (cap) is recommended. The exciting news is that now you can have a crown that gives you the strength, beauty, translucency and feel of natural tooth.

"Genetics gave me my look, Dr. Daher gave me my smile".

"CREATE A HOLLYWOOD SMILE" WITH VENEERS

If you are not happy with the alignment, color or form of your teeth, now you can greatly improve your smile with ceramic veneers, a thin layer of porcelain that is bonded to the front of your teeth and becomes part of the tooth.
